

# More Features and Benefits Than Before.....

now it strobos with flexible scopes and includes digital DVD recording

## STROBOCAM® II

**StoboCAM® II can satisfy the routine video needs of the ENT practice and perform stroboscopy at the touch of a button. It is a camera and light source platform which electronically shutters the camera in sequence with the frequency of the human voice. Stroboscopic examination of the vocal cords is achieved by using this advanced technology. This cost-effective design eliminates the need for more expensive flashing light consoles and is about half the price of more expensive computer based systems.**

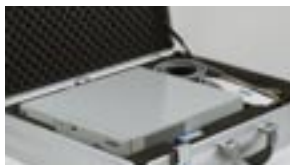

# STROBOCAM® II

## Comes with everything needed:

- Camera / Light Source Platform
  - Camera Head with Cable and Fixed Coupler
  - 13" Flat Screen Receiver / Monitor
  - High Performance 70° Laryngoscope and Fiber Optic Cable
  - Microphone for Frequency, Amplitude, and Quality of Voice
